

Accident Investigator Training

Overview

Hazards exist in all workplaces and in most situations there are effective measures in place to control them. However, incidents and accidents do occasionally occur – indicating that some of these controls are not as effective as they should be.

Learning lessons from accidents and incidents is vital to reduce losses to your organisation. This workshop draws on the guidance published by the Health & Safety Executive (HSE) in their accident investigation guidance (HSG245) to develop foundation skills in accident investigation.

Who should attend?

This workshop has been developed for anyone whose role requires them to carry out investigations into accidents and incidents.

Duration

This is a two day workshop.

Price

£550+VAT per delegate, based on six delegates attending.

Location

This training will be carried out at your premises.

What will you learn?

The main areas covered by this practical workshop are:

- roles and responsibilities of investigators;
- the sequence of activities in an investigation;
- preserving short-life evidence;
- an introduction to interviewing techniques;
- causes of human error;
- techniques for identifying immediate and underlying causes;
- making effective recommendations, and;
- writing an investigation report in plain English.

Relevant case studies are used during the training.

Delegates will receive an investigator handbook as part of the workshop to help them recall investigation techniques when they carry out their first investigation.

An accident investigation report template can also be supplied (in Microsoft Word format), tailored to suit your organisation.

Customised training

We can customise any of our training to address the specific issues faced by your industry or business. Please contact us to find out more.
